

Embed branding

To customize the modules that you will integrate in your application we need the following information.

If you have a brand document, design system or similar, please send it to cryptoapi@bit2me.com

Color

Principal

 Primary color.

Texts

 Dark tone.

 Mid tone.

Feedback

 Success.

 Error.

Typography

To express your voice and tone brand, please tell us your corporate typography. You can do it in two ways:

- If it is included in Google Fonts, send us the link or give us it's name.
- If it wasn't included there, attach the font by replying the email. The ideal format is .woff and it needs to include **regular** and **bold**.

App images

There are some components as buttons, inputs and complex listings that we would need screenshot examples of how it looks like so we can apply the styles.

Any extra information is really appreciated.
